SUMMARY

Although clinically heterogenous, neurodegenerative disorders share basic cellular mechanisms of pathology (e.g. inflammation, protein aggregation, metabolic and oxidative stress). This course will provide a clinical, mechanistic and therapeutic integration of common mechanisms across different neurodegenerative pathologies such as Alzheimer’s and Parkinson’s diseases, amyotrophic lateral sclerosis, polyglutamine disorders, multiple sclerosis and neuropathic pain. Basic and clinical researchers will dynamically interact with the course participants providing the state of the art in the neurodegeneration field in a discussion-based course.

FACULTY

Amrit Mudher
University of Southampton, UK

Andréia Castro
University of Minho, PT

António Salgado
University of Minho, PT

Belém Marques
University of Minho, PT

Benjamin Wolozin
Boston University, US

Cédric Raoul
Institute for Neurosciences of Montpellier, FR

Fábio Teixeira
University of Minho, PT

Fernanda Marques
University of Minho, PT

Hugo Almeida
University of Minho, PT

Ioannis Sotiropoulos
University of Minho, PT

João Cerqueira
University of Minho, PT

Lidia Bakota
Universität Osnabrück, DE

Miguel Gago
Hospital da Senhora da Oliveira, PT

Nuno Lamas
University of Minho, PT

Nuno Silva
University of Minho, PT

Patrícia Maciel
University of Minho, PT

Paula Ludovico
University of Minho, PT

Ricardo Taipa
University of Minho, PT

Roland Brandt
Universität Osnabrück, DE

Tiago Gil Oliveira
University of Minho, PT

Vania Apkarian
Northwestern University, US

Yvon Trottier
Université de Strasbourg, FR
